Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Submitted (15-NOV-2002) Human Genetics, Baylor College of Medicine, One of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 15, 2002 this sequence version replaced gi:23269681.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.higsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table sequences and whole genome table sequences and whole genome table sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Worley, K.C.

Consensus quality: 230853 bases at least Q30
Consensu Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length

* (see http://www.lgsc.bcm.tmc.edu/docs/senbank_draft_data.html).

* NOTE: This is a "vorking draft" sequence. It currently

* consists of 13 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ORGANISM
                                                                                                                                                                                                                                                                    where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL; Sw:,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             31784
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        31844

                                                                                                                                                                                                                                                                                                                                                                                    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     seq length: 0 seq length: 2000000000

                                                                                                                                                                                                                                                                                                                                                                                                                                                   The patent discloses a method to produce adenine nucleotide translocator (ANT) proteins or ANT fusion proteins using recombinant expression constructs. ANT is a nuclear encoded protein and a major component of inner mitochondrial membrane. It mediates transport of adenosine di/tri-phosphates across the mitochondrial inner membrane and also serves as an important molecular component of the mitochondrial permeability transition pore, a modulator of apoptosis. ANT is used to identify agents or ligands that bind to, or interact with it. The ANT ligands are used to detect or isolate ANT in a biological sample, and therapeutically for regulating mitochondrial pore activity, for treating diseases associated with altered mitochondrial function, including Alzheimer's, Parkinson's and Huntington's diseases, cancer, psoriasis, diabetes, dystonia, caber's hereditary optic neuropathy, schizophrenia, mitochondrial diabetes and deafness (MIDD), and myoclonic disorders, mitochondrial diabetes and deafness (MIDD), and myoclonic capilepsy red ragged fibre syndrome. The present sequence is a cDNA cenceding adenine nucleotide translocator ANT3 from human brain.
                                                                                                                                                                                                                                                                                                                                                                                            Query Match

Human adenine nucleotide translocator-3 (ANT-3) cDNA sequence

Human; adenine nucleotide translocator-3; ANT-3; MTP; cyclophilin; mitochondrial permeability transition pore component; cell survival; mitochondrial core component; mitochondrial related disorder; cancer; Alzheimer's disease; diabetes mellitus; hyperproliferative disorder; ss

Andreyev ΑY, Frigeri LG;

New nucleic acid expression constructs, useful for screening for agents that alter mitochondrial permeability transition (MPT), comprises polynucleotide encoding MPT polypeptide or cyclophilin polypeptide

ANT proteins are mitochondrial permeability translition (MTP) pore components responsible for mediating transport of ADP across the mitochondrial inner membrane. ANT proteins interact with other mitochondrial core components e.g. cyclophilins to regulate MPT. The present invention relates to a novel nucleic acid expression construct comprising a promoter operably linked to a polynucleotide encoding a mitochondrial pore component polypeptide (e.g. ANT) fused to an energy transfer molecule (ETM) protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (e.g. green fluorescent protein (GFP) or a FLASH sequence). The novel expression construct can alter mitochondrial membrane permeability transition and/or alter the interaction between mitochondrial core components. The methods are useful for screening for agents that alter MPT and/or cell survival. These agents are useful for the prevention or treatment of diseases associated with altered mitochondrial function or dysfunctional cell survival, such as Alzheimer's disease, diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                mellitus, Parkinson's disease, Huntington's disease, schizophrenia, mitochondrial encephalopathy, lactic acidosis, stroke, hyperproliferative disorders e.g. cancer, and deafness.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
The invention relates to a recombinant expression construct (I) comprising a regulated promoter operably linked to a nucleic acid encoding an adenine nucleotide translocator (ANT) polypeptide. ANT proteins mediate the exchange of ATP synthesised in the mitochondrial matrix for ADP in the cytosol. (I) is useful for producing recombinant ANT polypeptide by transforming a prokaryotic or eukaryotic host cell an culturing the host cell. (I) is also useful for targeting a polypeptide of interest to a mitochondrial membrane, where ANT polypeptide is expressed as a fusion protein with the polypeptide of interest. Recombinant ANT polypeptide, or cells expressing the polypeptide. ANT ligand is useful for determining the presence of an ANT polypeptide. ANT ligand is useful for determining the presence of an ANT polypeptide, preferably ANTI, ANT2 or ANT3 in a biological sample and for isolating

Detectably labeled ANT ligand is also useful for identifying an agent that interacts with an ANT polypeptide. The present sequence represents the coding sequence of human ANT3.

The invention relates to human nucleic acids (AAI57798-AAI61369) and CC the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful CC in gene therapy. A composition containing a polypeptide or polynucleotide CC of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and CC localised neuropathies and central nervous system disease, smyotrophic CC lateral sclerosis, and Shy-Drager Syndrome. Other uses include the CC lateral sclerosis, and Shy-Drager Syndrome. Other uses include the CC utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic cand thrombolytic activity, arthritis and inflammation, leukaemias and CC Note: The sequence data for this patent did not form part of the printed corectification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   21-JAN-2000;

                                                                                                                                                                                                                                                        C.N.S
                                                                                                                                                                                                                                                              The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as alzheiner's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity-prager Syndrome. Other uses include the ActivinyInhibin activity, chemotactic/chemokinetic activity, damostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Tang

CC are differentially expressed in activated vascular tissue. The invention calso discloses a high throughput method for detecting differentially expressed cDNAs in a sample. The cDNAs of the invention may have expressed cDNAs in a sample. The cDNAs of the invention may have called in gene therapy. The cDNAs of the invention may have used in gene therapy. The cDNAs of the invention may be used in gene therapy. The cDNAs of the invention may be used in a sample, or screening several molecules or compounds to high-throughput methods for detecting differential expression of one or compounds in a sample, or screening several molecules or compounds to identify a molecule or compound that specifically binds a cDNA of the convention. A protein encoded by the cDNA may be used to screen several molecules or compounds to identify a ligand that specifically binds to the protein, or to produce or purify an antibody to the protein that can be used to detect a protein in a sample or purify a natural or crecombinant protein from a sample. The nucleotides may be useful for diagnosing, staging, or monitoring the progression of creptination injury, restenosis, or stroke. The cDNAs can also be used conclete acid molecules. Antibodies to the proteins encoded by the cDNAs can also be used collaborated vascular disease, apre-echangeia, ischaemia-conclete acid molecules. Antibodies to the protests, and chronic consum to distribution of the protein. The present sequence creptesents a cDNA of the invention that is differentially expressed in contributed vascular tissue. Combination for diagnosing, staging, treating, or monitoring the progression of treatment of a vascular disease, e.g. atherosclerosis, comprises several cDNAs that are differentially expressed in activated activated vascular tissue.

Note: The sequence data for this patent did not form part of the specification, but was obtained in electronic format directly frat http.seqdata.uspto.gov/sequence.html?DocID=20020137081. Claim 1; Page -; 18pp; English. comprises several vascular tissue -WPI; 2003-110597/10. Sequence 2592 BP; 520 A; 790 C; 766 G; 514 T; 2 other; ó from USPTO

identifying test encoded by human human diagnostic and therapeutic polypeptide useful for ifying test compound which specifically binds to a polyped by human diagnostic and therapeutic polynucleotide, a antibodies y binds to a polypeptide polynucleotide, and to

Claim SEQ ID No 573; 591pp; English.

The invention relates to novel human diagnostic and therapeutic complynucleotides designated dithp (ACC46080-ACC46749) and to their concoded proteins (DITHP; ABR41138-ABR41812). The invention also relates to polynucleotide sequences at least 90% identical to the dithp CDNA compounds of the invention; recombinant vectors, host cells and concombinant production of DITHP proteins; antibodies specific for DITHP proteins; antibodies specific for DITHP proteins; antibodies specific for DITHP proteins and DITHP protein sequences; methods of compounds which specifically bind a DITHP protein; and methods of compounds which specifically bind a DITHP protein; and methods of compounds which specifically bind a DITHP protein; and methods of compounds which specifically bind a DITHP protein; and methods of conditions including cancer and other cell proble. Dithp nucleic acid sequences and DITHP proteins may be used in the conditions including cancer and other cell conditions including cancer and other cell conditions including cancer and other cell conditions including cancers; metabolic conditions including cancers; metab ftp.wipo.int/pub/published_pct_sequences.

Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and drug toxicity -Claim 1; SEQ ID No 332; 114pp; English.

The invention relates to detecting (MI) granulocyte (GC) activation (C (GCA), by detecting the level of expression of gene(s) (Gs) identified by CDNA (chip analysis as given in the specification, and comparing CC GC, where differential expression level in an unactivated CC GC, where differential expression of GS is indicative of GCA. CC Also included are modulating (M2) GA by contacting GC with an agent CC that alters the expression of at least one gene in Gs; (2) screening (M3) GC Aron an inflammation (especially CC chronic) in a tissue, an allergic response in a subject, exposure of a CC subject to a pathogen or sterile inflammatory disease using the CC gene expression profile; (3) detecting (M4) an inflammation (especially CC chronic) in a tissue, an allergic response in a subject, exposure of a Subject to a pathogen or sterile inflammatory disease, by detecting the CC level of expression in a sample of the tissue of gene(s) from Gs, where CC the level of expression in a sample of the tissue of judicative of inflammation (especially CC chronic) in a tissue, an inflammation (especially CC chronic) in a tissue, an altergic response in a subject to a pathogen or sterile inflammatory disease, by detecting the CC an altergic response in a subject to a pathogen or sterile inflammation (especially chronic) or in a tissue, an inflammation (especially chronic) or in a tissue, and inflammation (especially chronic) in a tissue, an altergic response in a subject to a pathogen or sterile inflammatory disease, by contacting a tissue having sustful for detecting an inflammation (especially chronic) in a tissue, an allergic response in a subject to a pathogen or sterile conflammation (especially chronic) in a tissue, an allergic response in a subject to a pathogen or sterile conflammatory disease, crohirs d Sequence ftp.wipo.int/pub/published_pct_sequences. 1116 BP; 231 A; 330 C; 346 G; 209 T; 0 other;

```
tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN93503-ABN97455 in a tissue sample. The method of the invention has hepatocropic, and cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, and toxicity, drug efficacy and drug metabolism. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fig. wipo.int/pub/published_pct_sequences.

The present invention describes a method (M1) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical ceasement to be tested for anti-neoplastic activity. determining a change in cexpression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in ABL6164 cc comprises a sequence (S) selected from 8447 sequences (given in ABL6164 cc expression is indicative of anti-neoplastic activity. (I) has cytostatic cactivity and can be used in gene therapy. MI can be used for screening cc an anti-neoplastic agent, and can be used for producing a product which ci s the data collected with respect to the anti-neoplastic agent as a cc result of MI, and the data is sufficient to convey the chemical cc treatment of cancer such as colon, breast, stomach, lung, thyroid, cc oesophageal, ovarian, kidney, prostate or pancreatic cancer, infiltrating ductal cancer, ci infiltrating doublar cancer, squamous cell cancer, infiltrating ductal cancer, cc carcinoma, papillary carcinoma and Wilm's tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 1; SEQ ID 7684; 44pp; English.

The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP43228) and to cDNAs encoding them (ABQ54131-ABQ56305), and also encompasses polypeptides 90% identical and polynucleotides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen polynucleotides, antibodies against human ovarian antigens, and the use of ovarian antigen polynucleotides and polypeptides in diagnosing, treating, prognosing or preventing various ovary and/or breast-related disorders. Such conditions include ovarian cancer and breast cancer, and metastatic tumours of ovarian or breast origin, reproductive system

Ovarian antigen polypeptides and polynucleotides may also be used in screening for compounds which modulate ovarian antigen expression or activity. The polynucleotides may further be used for gene therapy, chromosome mapping, in the identification of individuals and in forensic analysis, and the polypeptides may be used as food additives or to prepare antibodies useful in disease diagnosis, drug targeting and phenotyping. The present sequence represents cDNA encoding a human ovarian antigen of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               disorders (e.g., infertility, disorders of pregnancy, anovulation, polycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), end disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and to shock syndrome), inflammatory conditions (e.g., mastitis, oophorit vaginitis), immune disorders (e.g., congenital and acquired immunodeficiencies, autoimmune oophoritis, systemic lupus erythematic management of the systemic lupus of themselves the systemic lupus of the systemic lupus

CC compounds or the progression of these toxic effects by determining the CC global changes in gene expression in tissues or cells exposed to the CC toxin and comparing these to gene expression in unexposed tissues or CC eells. Also included are methods of predicting at least one toxic effect of a compound or progression of a toxic effect, preferably the CC hepatotoxicity of a compound, comprising detecting the level of expression in a tissue or cell sample exposed to the compound of two or CC more genes listed in the specification, where differential expression of the genes is indicative of at least one toxic effect or progression of the genes is indicative of at least one toxic effect or progression of the toxic response and predict cellular pathways that a compound modulates the CC in a cell. The methods utilise a set of at least two probes (on a solid compound to the compound modulates specifically hybridises to a gene listed in the specification, a computer CC system comprising a database containing information identifying the expression level in a tissue or cell sample exposed to a hepatotoxin of a cel set of genes comprising at least two genes listed in the specification, of a cel sited in the specification. The method is useful for at least one gene CC instead in the specification. The method is useful for at least one gene CC taisues or cell expression and for identifying the used as containing information used to present information containing information and for elucidating global containing information and for dentifying the used as containing information and containing information and toxicity markers in the problem of the physiological state of tissue or cell expression information of the physiological state of tissue or cell containing information and toxicity markers for the problem containing information and toxicity markers for the containing inc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   11-MAY-2001;

Hepatotoxicity is characterised by centrilibular necrosis and steatosis. The present sequence is an expressed sequence tag (EST) or cDNA derived from a gene which is differentially expressed in response to a hepatotoxic agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 1196 BP; 295 A; 279 C; 326 G; 296 T; 0 other;

                                                                                                              The present invention relates to a method of identifying a candidate insulin receptor (INR) signaling modulating agent, involving contacting an assay system comprising an insulin receptor signaling modifier (ISM) polypeptide or nucleic acid with a test agent, and detecting a test agent-biased activity of the assay system. The method is useful for identifying candidate INR signaling modulating agents. ISM genes may be used as drug targets for treatment of disorders related to INR signaling such as diabetes or metabolic syndrome. ISM nucleic acids and polypeptides are useful for identifying and testing agents that modulate ISM function and for other applications related to the involvement of ISM in INR signaling, and for identifying subjects having a predisposition to such diseases associated with INR signaling. The present sequence is an ISM coding sequence described in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                 Identifying an insulin receptor signaling modulator, useful as ditargets for treating diabetes or metabolic disorders, comprises contacting an assay system comprising insulin receptor signaling modifiers with a test agent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Seidel-Dugan
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              12-JAN-2001;
